

No Internal Ramp.

If floor of lift is shielding, then need hardly any further shielding + doubles as radon door

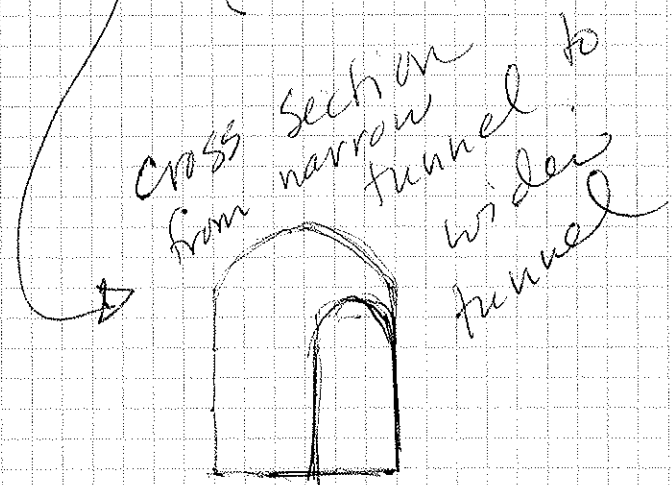

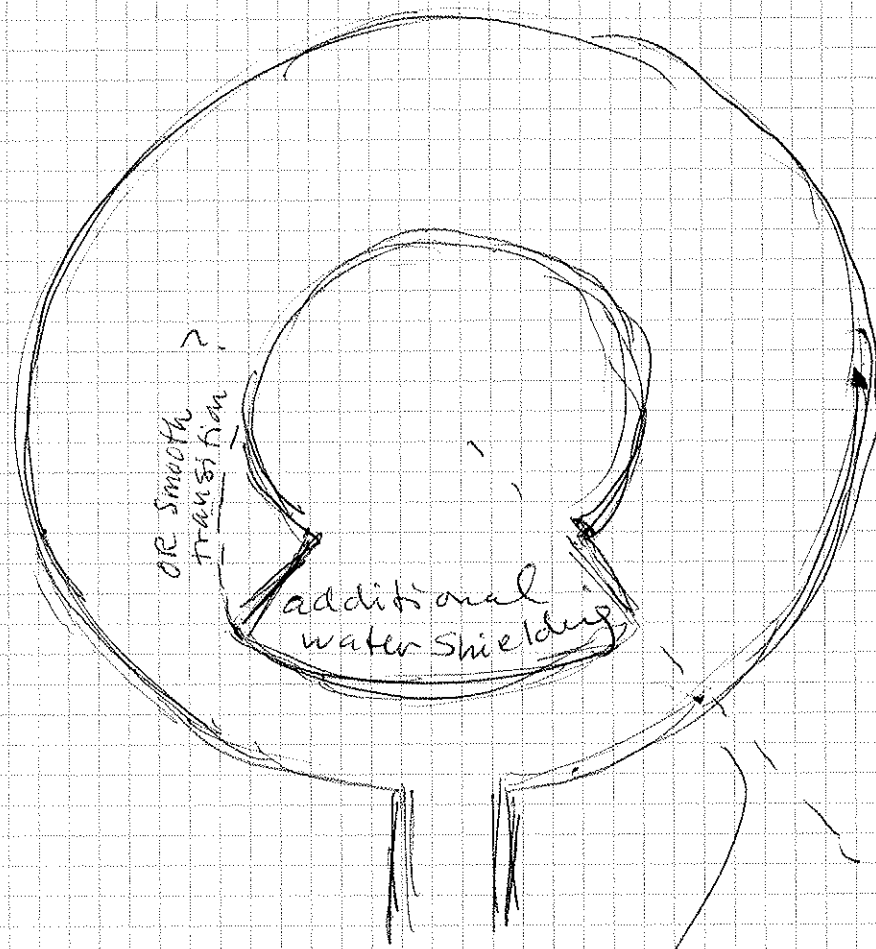

$$2.3 \times 3.3 \times 4.5 = 34.2 \text{ m}^3$$

1.5 m down over 4 m run (too steep?)

2.5 m height clearance (too short?)

Can water be used for Shadow Shielding?

Can acrylic tunnels be made this way?

How do they change diameter?
Water pressure on flat surfaces = Bad.
