

```
////////////////////////////////////////////////////////////////////////
/*      LUXSimExampleSimpleDetector.cc
*
* This is the code file to define the LZ20 Detector which is composed of a
* water shield, scintillator (which for now uses the properties of water),
* and liquid Xenon encased in Titanium.
*
***** Change log *****
*      26 March 2010 - Initial submission (Monica)
*      26 March 2010 - altered to take out warnings when compiling
*/
