

An Update to the Input of Persephone

October, 2012 by Matthew Bruemmer

Mandatory Fields

Sample Information

- Name
- Description
- Source
- Owner/Input
- Tags for searching

Measurement

- Institution
- Technique
- Date
- Requestor
 - Contact Information
- Practitioner
 - Contact Information
- Description
- Results
 - This needs some sort of input constraints for isotopes, value, units, etc.

Data Source

- Information on the data input
 - Reference with contact name and email

Extendibility

This needs to be talked about as a group.

*Can we have people enter in their own field names? **Yes.***

*Can we have people create extensions to mandatory fields? **Yes, but we will need to balance it with our current system.***

*What is added in the description field under sample information and how does this relate to how we can use extendibility? **Yes for extendibility in the sample field, but it might not be limited to one additional field.***

Fields I have noticed with testing Data Entry

- Geometry
- Mass
- Color
- Storage
- Comments (from supplier or input)
- **Extendibility on isotopes**
 - need a stronger tabular layout for this
