Station Name	1100	L
--------------	------	---

Use Brunton compass adjacent to sensor measurement jig, measuring North (N) and South (S). Reverse the jig and repeat recording the 4 measurements below. Record to your best guess of the nearest 0.1 degree. If orientation is more than 1 degree away from NS try to realign. For Trillium and STS2 sensors use left and right side of alignment rod

Brunton Left (N)	Brunton Left (S)	Brunton Right (N)	Brunton Right (S)

O3	30 Hardware Setup
	Install solar panels on post using brackets and wood screws.
.14/	Reconfigure guy wires if necessary
1 ' II 9	Place the dog house near the solar panel pole with the door facing downhill to allow water to drain
' (-	Install GPS on top of pole (must see the sky)
)—	Install Wilan radio on the pole (make sure the antenna is on the side facing Yates)
7	Run GPS and network cables and connect to Q330 (do not bundle up until testing is finished)
	Connect the baler to the Q330
Po	wer system tests:
	tial battery voltage (V) / C / Un lorgruy
	Sun condition when tested (circle one): (a) sun on panels, (b) cloudy, (c) sun on panels at low angle
	Panel 1 output (V)
	Panel 2 output (V)
Ec	uipment power up:
16/	Make sure power box is set for sealed battery mode
JIN 1-	Plug battery into power box. Record voltage showing on LCD display (V)
1 0 /-	Connect both solar panels to power box. Record voltage on display (V) N/A
\overline{x}	If all looks ok, connect the Q330 to power (Note with Guralp unlock cannot happen till now)
	Check here when the GPS LED goes yellow
	_eneck here when the GIB ELD goes yellow
